nice old style turn based tactical game with good new features implemented. nice graphics too. would like less DLC and more game. #turn based #tactical. Throwing your keyboard across the room because you lost to a pink gumball in a race simulator 2008. Get it while it costs as much as 5 Ethiopian Lifetimes.. Chinese product, a competent clone of Touhou's style of Shmup, with emphasis on sound system.

I'm not a specialist of Touhou's side of Shmups, but even knowing that you can believe that the gamedesign is widely acceptable right here. Scoring system is heavily linked with survey, and the system itself is pretty competent too.

The OST is great and the general rythm of the game is nothing to complain about, only cons to me are the weak challenge on normal mode (but you got superior difficulty levels, so its alike Touhou games i guess), and the fact that all menus are in (simplified, but still) Chinese, so i haven't found a clue to make my D-pad works on this game. And playing with analogic stick, even from a XONE controller, is no good to me. At all.

Otherwise, i would recommend this danmaku for anyone who want something different, or obviously for any Zun's enthusiast. Until Touhou 16's arrival on Steam, that's it i guess.. This is a very funny, lighthearted game with unique art style that reminds me of Tim Burton's early concept sketches. I was a little turned off by the controls in the very beginning, but you get used to them after a while.

The puzzles are very intuitive most of the time, and when they are not, hints are right there in the game menu, no walkthrough googling needed.

I really think fans of less hardcore, quicker adventures that are more funny than challenging should give it a try.. OK i guess.

while rough around the edges, I like this game quite a bit. I think that tower defense is an interesting game to try to make in VR so I gave it a shot. Seems a lot more solid than I was led to believe. There have been a few changes so far, and the dev seems pretty responsive to make changes and fix things. Wish there was more in story mode, but otherwise I've played this game more than most of the other ones.. I was extremely dissatisfied with this product, even for being on sale by half it was not worth it.

The reasons are the sheer size of the product with it being over 15,000MBs.

Slow to start up and import videos to edit

Videos in different formats that need time to activate to be able to try and edit

Clunky UI that does not show the video playing but I could hear audio

And I've already stated but just how slow it is to start, I have little time to focus on editing and/or want to

work on other projects on my limited free time.

I would recommend people trying Movavi Video Editor Plus, it is the same price that this one is on sale, faster to start, and takes up a fraction of space this one takes (no joke 158MBs), has simple layout and instructions so you won't be confused when it first starts out, and the price is reasonable for people on a budget.. Rest in peace Sumi. you are Dead by "Ice trap". Not bad for a pixel-graphics game, I've seen worse.

No skill needed. Best thing is, there is no rush.

Press space to stop, observe, disable obstacles and turn on street lights.

Take your time crossing the spike traps, use the booster if you're struggling with the timing.

Booster refills every 10 seconds.

One tutorial and six cities.

. I do not recommend this game because the developer promised an update that would fix the bugs and add a save system in a week and he did not do it in 3 weeks as for now it's good to wait until buying this game until you see some discussions about updates that are actually added to the game as for now the game has max 2 h of gameplay what you can not save.

. I played a ton of this 20 years ago. This was the proper conglomerate simulator - you start off with a pile of cash and start setting up firms. You could choose to simply be an import shop that sold port goods to local cities, you could start vertically integrating up the manufacturing chain to source raw materials and build factories to get your product to market, you could start horizontally integrating to buy out your opponents and achieve 100% market share in various goods. If you don't know much about business this is a solid game for you - I believe some of the marketing spiel for this game talked about how it was used at Harvard Business to illustrate basic business concepts. At its time it was one of the most complex and enjoyable simulators on the market

There are lots of silly little simplifications for the model - all labor is paid the same whether or not they're cashiers at the department store or researchers in a R&D lab, for example. Your 'department stores' can only sell 4 things maximum. But hey, 20 year old DOS game.

Here's hoping CapII makes it onto steam (much better UI), or better yet the guy who made the games makes a CapIII.

EDIT: One sad thing about this game being on Steam and not on a box on a shelf is that the boxed shelf version came with a gigantic manual hundreds of pages long explaining how the business model in the game worked and how each firm and logical block in each firm interacted, as well as an enormous index of every product in the game and its supply chain and logistical requirements. It's all info you can get in game, of course, but that manual was something to behold way back when.. This game is boring and bland... Not worth your hard earned pennies.
